

REMARKS

Claim 1 has been amended to call for a situation where four display elements intersect an integrated circuit block mounted in a recess. As a result, the integrated circuit is precisely positioned to service four adjacent display elements. The ability to position the integrated circuit at a most desirable position is advantageous.

No such arrangement is shown in the cited references and, therefore, the present application should now be in condition for allowance.

Respectfully submitted,

Date: December 2, 2004
